General Information

- **Project Status:** Operational
- **Project Type:** Fertilizer - nitrogen based
- **Industrial Area:** Alberta's Industrial Heartland
- **Location:** Fort Saskatchewan
- **Ownership:** Nutrien - Publicly traded.
- **Land Holdings (acres):** 560
- **Approx. employees and full time contractors (excluding construction workforce):** 130

Company Profile

Nutrients play a critical role in the production of safe abundant food, replenishing our soils and minimizing destruction of wildlife habitat. Nutrien is working to ensure nutrients contribute to a more sustainable world.

The Fort Saskatchewan facility produces 465,000 gross tonnes (192,000 net) of anhydrous ammonia, 430,000 tonnes of granular urea and 95,000 tonnes of 29% aqua ammonia. Water, air and natural gas are the raw materials required to produce these products. Water is obtained from the adjacent North Saskatchewan River and natural gas is purchased from Alberta producers.

The Nutrien Fort Saskatchewan plant occupies 227 hectares of land. The actual production facilities occupy less than one-tenth of the land area. The remainder is used as a buffer zone between the site and the City of Fort Saskatchewan.

Products

- Anhydrous ammonia, Granular urea, Aqua ammonia

Infrastructure

- **Road Access:** Located on River Road - accessed via Highway 15 and 119 Street
- **Rail Access:** CN
- **Pipeline Access:**
- **Power Provider:** Fortis
